(57) Methods and systems are disclosed for creating a tamper proof record chain of a transaction comprising a number of transaction milestones. For each transaction milestone a record entry is created. A timestamp and a data message that includes at least part of a term of the transaction or an identifier of a party are received, each being associated with the milestone. A value is obtained that provides a link to an immediately preceding and/or following record, if any; and the data message, timestamp and link value are written to the record entry. The record entry is written to a tamper proof storage configured to disable its modification after completing the write operation. A series of data messages of the linked record entries in the tamper proof storage includes at least an identifier of each party to the transaction and represents the record chain for the transaction.
